[LinkedIn:Raj Sawant](#)

OBJECTIVE

Java Developer with 3+ years of experience in building scalable microservices using Spring Boot, REST APIs, Apache Kafka, and AWS, with expertise in performance optimization and cloud integration.

EDUCATION

Bachelor of Computer Science, D.Y Patil University
CGPA: 8.32

2018 – 2022

SKILLS

Tech Skills	Spring Boot, Spring, Apache Kafka, AWS Lambda, AWS DynamoDB, Oracle SQL, GitHub
Soft Skills	Problem Solving, Leadership, Collaboration

EXPERIENCE

Application Developer

SBI General Insurance Limited

Jun 2022 - Present

Mumbai

- Designed and developed microservices-driven applications using Spring Boot, enhancing system performance and scalability by 80%.
- Designed and implemented RESTful APIs (e.g., Status APIs for OEM, Multiple Fetch Data APIs) to facilitate seamless integration, reducing API response time by 40% and enhancing system efficiency.
- Successfully deployed projects from development to production, achieving a 99.9% uptime and reducing deployment failures.
- Documented software architecture, SOPs (Standard Operating Procedures) and API documentation to facilitate knowledge sharing and faster collaboration among team members.

PROJECTS

Centralized CKYC Application

Developed a Centralized CKYC Application integrating with CERSAI to automate CKYC Number generation before policy issuance, which resulted in significant reductions in manual efforts by 95%. Built using Spring Boot, ReactJS, and Oracle SQL, RESTful Microservices, batch jobs for seamless data synchronization.

Serverless Expense Tracker

Designed and developed a serverless expense tracking application using AWS services, ensuring cost-effective deployment. Built using AWS Lambda, API Gateway, DynamoDB, ReactJS.

Event-Driven Notification System

Designed and developed a real-time transaction notification system through Event-Driven Architecture. Built using Spring Boot, Apache Kafka, Oracle SQL.

CERTIFICATIONS

- AWS Certified Cloud Practitioner**
Gained hands-on experience with AWS services including Lambda, DynamoDB, API Gateway, and EC2, demonstrating proficiency in cloud-based solutions and practical implementation.
- Containerized Application using AWS**
Acquired expertise in AWS App Runner, Docker Containers, and Amazon Elastic Container Registry (ECR), focusing on containerization and cloud deployment strategies for scalable applications.
